Problem

What problem will this application solve?
What key characteristics of the problem area should be considered?

Goal

What impact will this solution have?
How does it change the lives of the people affected?

User

Who is this solution for?
Who is the user?
Is user different from beneficiary? What is the value of this service for them?

Please use the **stakeholder mapping canvas**.

Impact

What will this solution do?
What are the key activities?

Human factors

What is the role of human in the solution?
Are there special needs to consider?
(disabled, youth, elderly etc.)

Format

What is the format of this solution?
How is this solution distributed?

Key stakeholders

Who are the key stakeholders you need to access?
What other groups might be affected? Who has the power to decide on resources needed for the solution?

Risks

What are the potential unexpected negative impacts?
How will the risks be mitigated?

Please use **the impact canvas**.

Machine factors

What is the role of machine in the solution?
What technical capacity is needed?

Data

What data is needed?
What data already exists?
Who has access to it?
What are the main ethical considerations?

Scalability

What other similar solutions exist?
Can this solution be used elsewhere or for another purpose?

Financing

How will the solution be financed? Does it have a business model built in?
Is it financed by donations?
